
Pharmacy Technology Solutions

Medication Review Module

Pharmacy Technology Solutions is proud to announce our exclusive Patient-Focused Services offering: a Medication Review module that fully integrates with PharmaClik Rx and is available in a mobile app for use within your pharmacy. Available in Alberta, British Columbia, New Brunswick, Nova Scotia and Ontario, our Medication Review module allows you to conduct medication reviews at a pharmacy workstation and on a mobile device. This ensures faster and easier execution, with minimal paperwork.

This module was developed in partnership with a dedicated group of your peers: PharmaClik Rx users from across Canada who are committed to offering enhanced patient-focused services in their pharmacies.

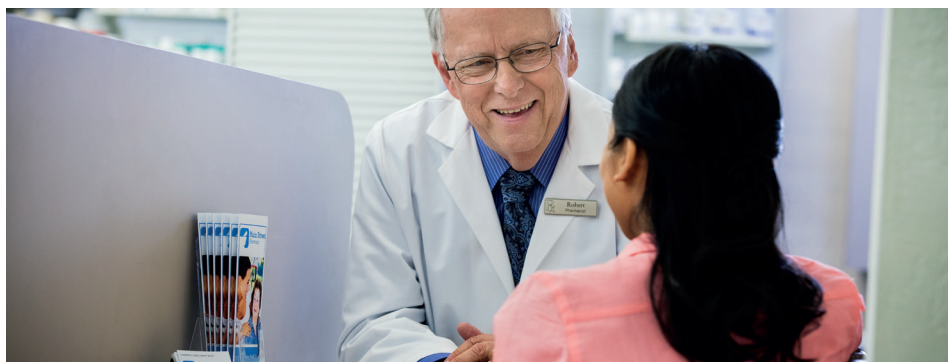

Features of the Medication Review Module include:

- Direct access from the PharmaClik Rx Workbench or from Rx actions.
- Notifications in the Patient folder and Rx Detail identify patients who are eligible for a medication review, including the ability to generate an invitation letter.
- A patient list can be generated daily to find eligible patients.
- Prepare and save a medication review prior to meeting with the patient.
- Recording patient clinical data, OTCs and other medications in the medication review automatically updates the patient's folder in PharmaClik Rx.
- Prescriptions can be inactivated directly from the medication review, which updates the patient's profile.
- Opportunities for pharmaceutical opinions can be triggered directly from the medication review. (Ontario)
- Upon completion of the medication review, the billing prescription is created on the Workbench To Do tab in PharmaClik Rx.
- Supports digital signature capture.
- Scheduled appointments ensure compliance with record-keeping regulations.
- Print patient counselling and companion product leaflets from the medication review.
- View a history of previous medication reviews.
- Carry forward information that has been documented on a previous medication review, such as 'Reason for Use' and Pharmacist notes.
- Scan and attach documents directly from the medication review.
- An information letter can be sent to prescribers.

Join your peers across Canada, using the Medication Review Module
